

Disclosure for global systemically important banks (G-SIBs) indicators as of 31 December 2015

In order to comply with disclosure requirements and methodology described in the July 2013 document entitled “Global systemically important banks: updated assessment methodology and the higher loss absorbency requirement”¹, we attach information, corresponding to the fiscal year 2015.

The Basel Committee on Banking Supervision (BCBS) assesses the systemic importance of banks in a global context.

Global systemic importance is measured in terms of the impact a bank's failure can have on the global financial system and the wider economy, rather than the risk that a failure could occur.

The measurement approach of the global systemic importance is indicator-based. The indicators shall reflect the size of banks, their interconnectedness, the lack of readily available substitutes or financial institution infrastructure for the services they provide, their global (cross-jurisdictional) activity and their complexity.

The indicators provided below are calculated based on specific instructions by the BCBS and thus are not directly comparable against other disclosed information.

Please, be aware that this disclosed information could be subject to changes because is still under review by National Supervisor Authority and also by Basel Committee on Banking Supervision.

Articles 128 and 131 of Directive 2013/36/EU of the European Parliament incorporate at European level the obligation to maintain capital buffers for global systemically important entities. This has been transposed to Spanish regulation by the law 10/2014, “de ordenación, supervisión y solvencia de entidades de crédito”. According to this law, capital buffer for systemic entities is being required from January 1st, 2016, subject to transitional period.
